Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art does not teach a CVT having the claimed combination of a support member fixed directly to a casing, a plurality of needle roller bearings supporting the pivot shafts of the trunnions on the support member, a plurality of spherical-surface bearings for supporting the needle roller bearings, the spherical-surface bearings each having spherical surface shaped inner and outer races, wherein the axial direction shifting movement of the trunnion is carried out between the pivot shaft and the needle roller bearing by a sliding movement of the trunnion. The prior art to Machida et al. (US Patent 6,592,491) teaches a CVT having a similar supporting arrangement for supporting a trunnion with respect to a transmission casing (see last Office Action), but does not teach the axial movement of the trunnion taking place between the pivot shaft and the needle roller bearing. Machida et al. (US Patent 6,592,491) discloses a ball spline connection (263-266) used to support the trunnion for axial movement, and that no relative axial movement exist between the pivot shaft and the needle roller bearing. Accordingly, claim 5 is allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
